Hobby tunnel, 2m or 3m

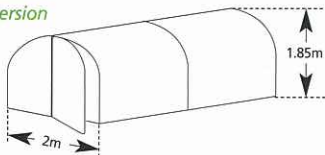

Example of interior layout

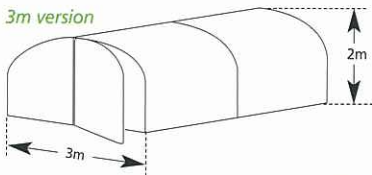

Hobby tunnel, 4.50 m

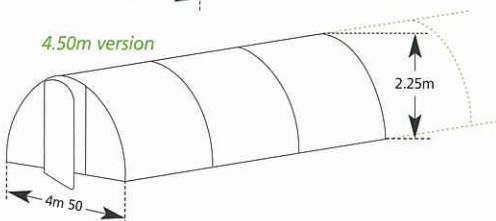

2m version

3m version

4.50m version

AVAILABLE IN THREE WIDTHS : 2m, 3m and 4.50m.

MODULAR LENGTH. The 3m and 4.50m hobby tunnels can be equipped upon request with additional modules of 1.50m long, until required length is obtained. These additions may be installed at anytime, and the tunnel will evolve as required within the space available.

A 2ND DOOR IN OPTION. Equipped with a gable end and a full gable as standard, the 3m and 4.50m hobby tunnels may have a second gable door fitted upon request if conditions of use so require.

SIMPLE TO ASSEMBLE. The hobby tunnel is assembled by slotting and screwing the various structural elements together. No special tools are required for assembly.

STURDINESS AND RELIABILITY. Using the same technology and materials as the professional ranges, the structure is made of galvanised Ø 32 steel tubes. The cladding is made of 180 micron polyethylene sheet, doubled on covering. It is anchored to the ground by cruciform feet and buried film.

QUALITY/ PRICE PERFORMANCE. RICHEL, the leading producer of greenhouses for horticulture and market gardening in Europe, has an industrial structure that guarantees you the highest possible quality/price ratio.
